1378. Replace Employee ID With The Unique Identifier

id is the primary key (column with unique values) for this table.

Each row of this table contains the id and the name of an employee in a company.

(id, unique_id) is the primary key (combination of columns with unique values) for this table.

Each row of this table contains the id and the corresponding unique id of an employee in the company.

Write a solution to show the **unique ID** of each user, If a user does not have a unique ID replace just show null.

Return the result table in any order.

The result format is in the following example.

Example 1:

Input:

Employees table:
+---+
| id | name |
+---+
1	Alice
7	Bob
11	Meir
90	Winston
3	Jonathan
+---+	
EmployeeUNI table:	
+---+	
id	unique_id

```
+---+
|3|1|
| 11 | 2
| 90 | 3
+----+
Output:
+----+
| unique_id | name |
+----+
| null | Alice |
| null | Bob
12
    | Meir
13
    | Winston |
    | Jonathan |
| 1
+----+
```

Explanation:

Alice and Bob do not have a unique ID, We will show null instead.

The unique ID of Meir is 2.

The unique ID of Winston is 3.

The unique ID of Jonathan is 1.

Write your MySQL query statement below

SELECT IFNULL(eu.unique_id, NULL) AS unique_id, e.name FROM Employees e

LEFT JOIN EmployeeUNI eu ON e.id = eu.id;
