1683. Invalid Tweets

Table: Tweets

```
+----------------+----------+
| Column Name    | Type     |
+----------------+----------+
| tweet_id       | int      |
| content        | varchar  |
+----------------+----------+
```
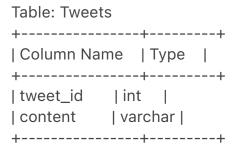

tweet_id is the primary key (column with unique values) for this table.
This table contains all the tweets in a social media app.

Write a solution to find the IDs of the invalid tweets. The tweet is invalid if the number of characters used in the content of the tweet is **strictly greater** than 15.
Return the result table in **any order**.
The result format is in the following example.

Example 1:
Input:
Tweets table:

```
+----------+----------------------------------+
| tweet_id | content                          |
+----------+----------------------------------+
| 1        | Vote for Biden                   |
| 2        | Let us make America great again! |
+----------+----------------------------------+
```

Output:

```
+----------+
| tweet_id |
+----------+
| 2        |
+----------+
```

Explanation:
Tweet 1 has length = 14. It is a valid tweet.
Tweet 2 has length = 32. It is an invalid tweet.

 # Write your MySQL query statement below

select tweet_id from Tweets where length(content)>15
